

Bodypoint Timeline:

1991

Bodypoint Founded in Seattle

1994

We introduce the first medial 4-point hip belt, which greatly reduces shifting of the pelvis to improve stability in the wheelchair.

1995

We patent the [Clickit® Seat Latch](#).

2001

Our [Tri-lock Midline Joystick Mount](#) offers huge improvements over previous models, quickly becoming a preferred after-market chair accessory for its versatility and precision-action.

2003

We introduce and patent the [Cinch-Mount™ End Fitting](#), which enables quick installation and makes it extremely easy to adjust the length and buckle placement of any belt or harness.

2007

We think outside the wheelchair to introduce the [Aeromesh® Bath Belt](#), addressing the challenge of securing users in wet and slippery shower chairs with a quick-drying material that is friendly to the skin.

2010

The patented modular [Push-Button Buckle](#) allows for ease-of-release fine tuning and makes it the most adaptable, compact, easy-to-tighten and indestructible means of securing a wheelchair belt.

2013

The [PivotFit™ Dynamic Shoulder Harness](#) combines a comfortable fit with a seriously engineered high-strength swivel buckle, for a central release that's both elegant and secure.

1996

Our [Ankle Huggers® Support Straps](#) revolutionize leg support and foot positioning to provide a more friendly, comfortable and dynamic alternative to rigid shoe holders or foot straps.

2001

The [Fulcrum Adjustable Angle Footplate](#) is introduced and wins Best New Product at the Canadian Posture and Seating Symposium for its revolutionary way of accommodating foot inversion/eversion.

2004

The patented [Hip Grip® Pelvic Stabilizer](#) dramatically changes the concept of pelvic stability from a fixed position to a stabilized range of movement that enhances reach and independence.

2005

Combining the strength of a shoulder harness with the comfort of a stretchy butterfly bib, the [Dynamic Stayflex™ Chest Support](#) ensures optimal trunk control while reducing the choking hazard found in many chest supports.

2008

The patented [Rehab Latch™ Buckle](#) is the first buckle designed specifically around the needs of wheelchair users - easily manipulated by the weakest hands, yet secure enough to resist accidental release.

2011

Solving the age-old problem of having a belt get caught in the wheelchair during transfer, we create the [Evoflex® Pelvic Stabilizer](#) with its patented tapered thermoplastic end strap.
